2018 Data Collection

➤ Item 19a. Was delayed umbilical cord clamping performed? [DCCDONE]

- Yes
- No
- Unknown

➤ Item 19b. How long was umbilical cord clamping delayed [DCCTIME]

- < 30 seconds
- 30-60 seconds
- >60 seconds
- N/A
- Unknown

➤ Item 19c. If DCC was not done, reason why (OPTIONAL)?

[DCCNOTWHY][DCCNOTWHYDESC]

- Maternal Bleeding
- Neonatal Causes
- Other _____(free text field)
- Unknown

➤ Item 19d. Was umbilical cord milking performed? [DCCCORDMILK]

- Yes
- No
- Unknown

➤ Item 19e. Did breathing begin before umbilical cord clamping? [DCCBREATH]

- Yes
- No
- Unknown

19. Delayed Cord Clamping

a) Was delayed umbilical cord clamping performed?

 

b) How long was umbilical cord clamping delayed?

 

c) Why was umbilical cord clamping not performed? [optional]

 

If other, description:

d) Was umbilical cord milking performed?

 

e) Did breathing begin before umbilical cord clamping?

 

Questions?

- Do you have any information on Apgar timing and DCC? I am interested in finding out when facilities are starting their Apgar timers. Are they waiting until the cord is clamped or are they starting it when the baby has been completely extracted from the mother?
- The delayed cord clamping times are <30sec, 30-60 and >60sec, since there is not a low number indicated on the <30sec would 1 sec etc. be considered delayed cord clamping for the first question of was it performed yes or no? I am wondering if we (delivery team) are looking at this question the same way as other hospitals.
