

Still-In-Hospital (SIH) Table

Procedures for Submitting Records for Infants Born in 2017 and Still Hospitalized as of the June 1st Deadline for Infants Born in 2018.

- Data forms for infants whose records have Items 1-34, and Items 36-52 completed and which have no final disposition status and no errors will have a Record Status coded “SIH.” A record status code of “SIH” indicates that the infant is still hospitalized, has not been discharged home or reached his/her first birthday.
- A Record Status code of “SIH” is temporary and will be changed to a “Complete” status code when the infant is discharged to Home OR the infant is marked as “Still hospitalized as of 1st birthday” and the record is updated with a final discharge date. The SIH status code is not appropriate for infants who are more than a year old. Data Contacts should periodically check to be sure that records are finalized when an infant dies, is discharged home or reaches his or her first birthday while still in the hospital.
- **Note: For infants who are still hospitalized when data is finalized by the June 1st deadline, items 1-34 and items 36-52 on the Admission Discharge Form must be completed.**
- While it is possible that items coded “No” may later change to “Yes”, the purpose of completing these items is to assure that data for the Annual Reports is as complete as possible.
- **Pease refer to the summary table on page 2.**

2017/2018 SIH Table

Procedures for Submitting Data for Infants Born in 2017 and Still Hospitalized as of June 1st Data Finalization Deadline in 2018

Data Item	Item 54. Infant is still in your hospital and has not yet been transported out	Item 54.
